

Queue Management Solutions

Advanced Security offers queue management solutions to protect your health and safety.

Advanced Security's Queue Management Solution provides the ability to generate and monitor a 2 metre Gap Rule at locations within your environment (e.g. Checkout Counter, ATM, Customer Service Counter, etc.). Actions are triggered when there is a breach of the 2 metre Gap Rule, which may include the likes of Audible Notifications, Status Indicator Lights, Staff alerts, etc. Selectable Queue threshold regions (up to 3 regions per camera) can be set to prompt the selected actions from each AXIS camera.

The AXIS camera can be connected to most industry-standard Video Management Systems, or it can be installed in a standalone mode. The AXIS camera can have an internal SD Card fitted for edge storage of video footage.

- **Generation of a 2 metre Gap Rule between people**
- **Selectable queue threshold regions per camera with appropriate action alerts**
- **Increase customer/visitor confidence, safety and satisfaction**
- **Streamline operational efficiency by avoiding delays**

As a leading nationwide electronic security integrator, we specialise in Corporate and Government electronic security solutions. An essential service, available 24/7, we are your trusted security provider.
